How do I install MS Office 2016 on PlayOnLinux

Asked 6 years ago Modified 7 months ago Viewed 149k times

How can I get **playonlinux** to install Microsoft Office 2016. The options from the install menu only go up to 2013.

23

Is there a more recent version of **PlayOnLinux** (or indeed **Wine**) I can download to enable installation of MS Office 2016?

The steps I take are:

1. open PlayOnLinux
 2. click Install
 3. Click Office
- returns a list of several software packages including MS Office 2007, 2010 and 2013 (but also not 2016)

I will provide directions that worked for me for a manual (non-script) installation of **Microsoft Office 2016 Professional Plus** on Ubuntu 18.04 using *PlayOnLinux (POL) v4.3.4* and *Wine x86 v3.4*. All the apps except OneNote opens, though I have only really used Word and Excel so I can't speak for the functionality of the other apps.

Firstly, try the default POL script and/or some of the other scripts here to check if they work because that would save you a lot of time and headache.

I tried the default script that comes with POL as well as some of the other scripts provided here but they became stuck (eg Office installation does not finish) or crashed at various points (eg "file not found" error). The below manual process essentially replicates those scripts and the advantage of this manual process is that you can see exactly where your specific setup might be encountering problems.

[POL forum post](#) as well as other

site, `wine:i386` needs to be installed. because it is tied to 2 packages. On `nbnd` for Office to start.

to install `wine-stable`, as it will cause some missing dependencies (didn't

lient `winbind`

- `smbclient -V` #Confirms that smbclient is installed
- `winbindd -V` #Confirms that winbind is installed

2. **Optional: Update POL** to the [latest version](#). This is because at one point POL gave an error indicating an update is needed and this error disappeared once I upgraded to POL v4.3.4. Here are the Ubuntu 18.04 (Bionic) instructions:

- `wget -q "http://deb.playonlinux.com/public.gpg" -O- | sudo apt-key add -`
- `sudo wget http://deb.playonlinux.com/playonlinux_bionic.list -O /etc/apt/sources.list.d/playonlinux.list`
- `sudo apt-get update`
- `sudo apt-get install playonlinux`

3. **Optional: download the Office 2016 installation file** if you don't already have it or have a CD. You can download it from MS using one of the below options. I assume you have downloaded the *Office 2016 Pro Plus* version in the rest of this answer.

- If the license is tied to your MS account, then use your [account dashboard](#).
- If you have the product key, use the [Download Earlier Versions of Office](#) page.
- If you just want to test installation, try downloading [using one of these direct links](#). Office 2016 Pro Plus link is the first one on that page.

4. **Optional: Install winetricks and mono**. I received various errors relating to winetricks and mono from the scripts I tried previously so I had already installed these by the time I tried the manual installation. It is uncertain whether installing these made any difference so you could try the manual installation steps below first and then come back to this step if you encounter errors.

- `sudo apt-get install winetricks`
- `winetricks dotnet45`

5. **Optional: Remove previous unsuccessful installation of Office 2016 on POL**. If your Virtual Drives with empty or partial before trying the below installation

ie top left of your primary display, and you connect the "correct" number of ly (subjective) again.

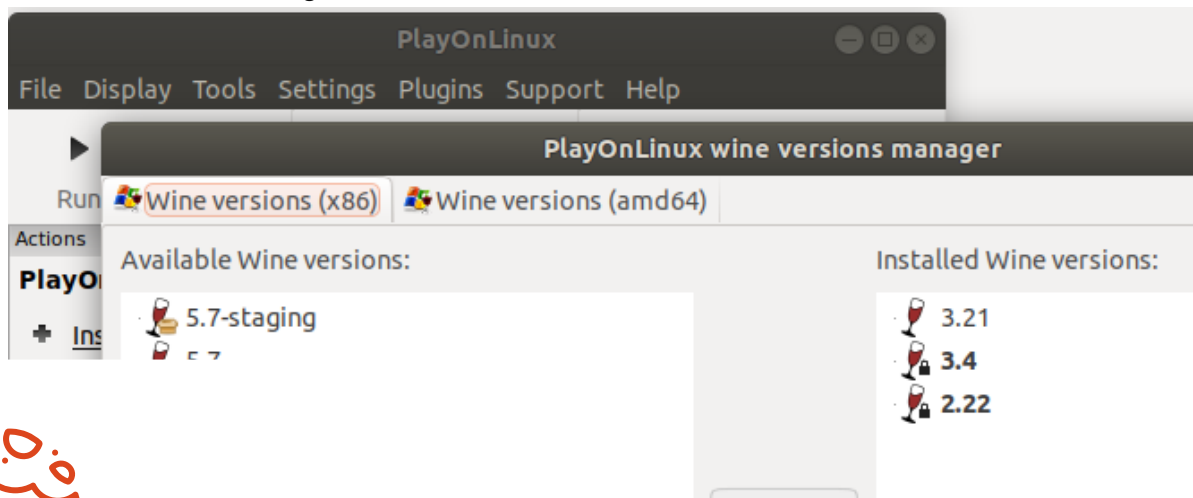

E.g.

- Install office with 2 displays
- Start office with 3 displays
- Close office and disconnect any number of displays (e.g. leave 1 display)
- Start office again. Office will start in the top left of your primary display.
- Connect 1 display to your computer (so now we have 2 displays).
- Start office again. Office will still start in the top left of your primary display.
- Office will only act properly if you connect the max number of displays you started Office in at any point of time (in this case 3 displays)

Setup POL

To consider: Wine x86 version 4.15 is more stable than 3.4 (below), or 3.14 (GlasierXplor's post on POL Forum). I.e. it does not crash randomly. The caveat is that there will be some issues with images, but should work fine 97~% of the time. Wine 4.15 requires the POL 4.3.4 update from the official POL repositories to be installed.

1. Wine x86 version 3.4 was used for this installation so check if it is installed by starting POL and then selecting **Tools -> Manage Wine Versions**.

Office 2016 drive (eg in the `office` directory). Hopefully it will install properly and

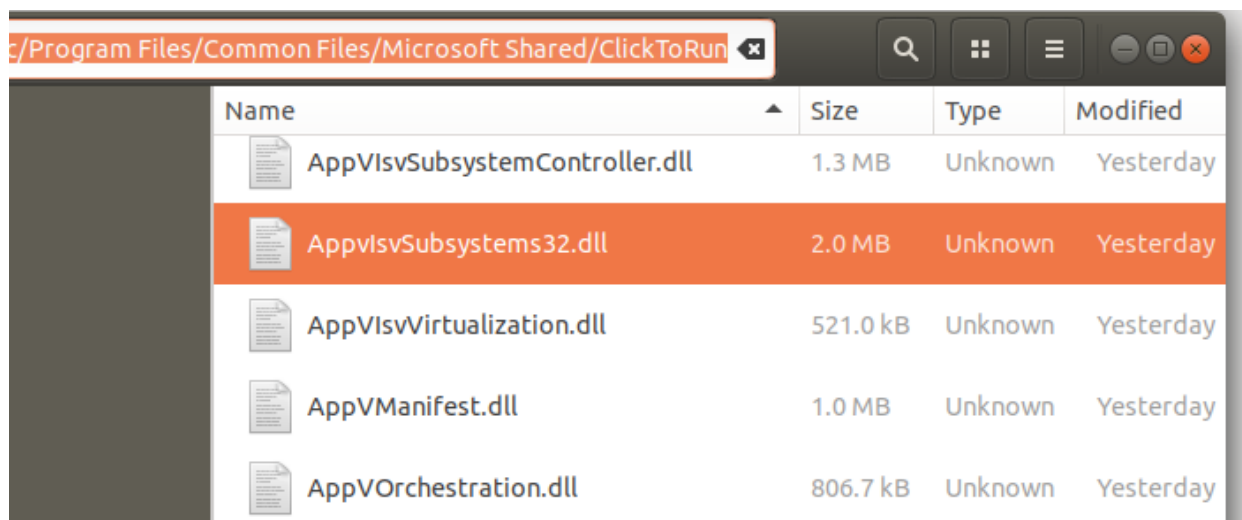

configuration screen to exit to the main

PlayOnLinux software.

In the POL configuration menu and select `Run a .exe file` in the left hand.

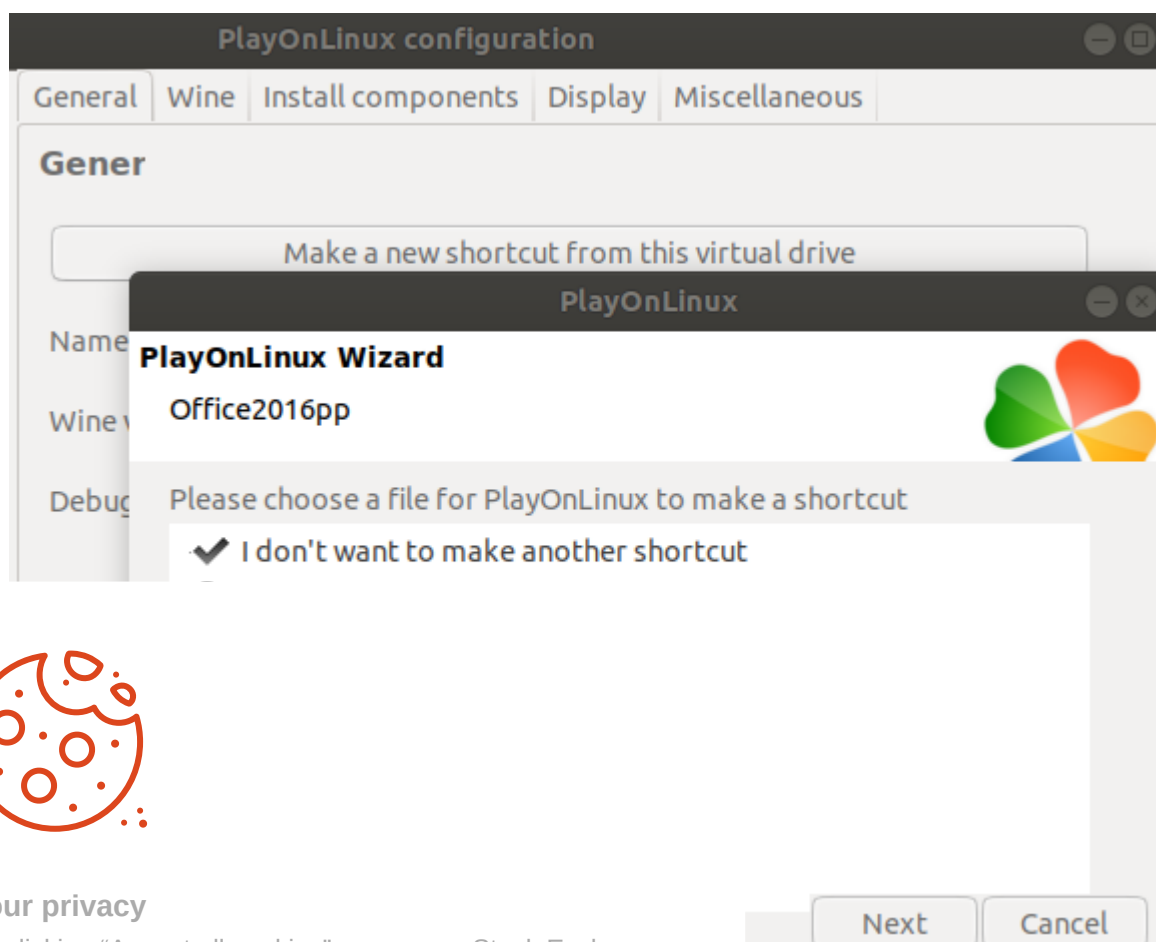

In the `Miscellaneous` tab and click on `open` button ("Files") window.

Go to `/Common Files/Microsoft` directory and copy `2.dll` and `c2r32.dll` to `Office16/`.

9. Close Nautilus and go back to the POL configuration screen.

10. In the Pol configuration screen, click on the **General** tab and click on **Make a new shortcut** from this virtual drive to start the POL Wizard in order to create links to the Office apps.

Your privacy

By clicking "Accept all cookies", you agree Stack Exchange can store cookies on your device and disclose information in accordance with our [Cookie Policy](#).

the app and name the link. Note that all.

Microsoft Word 2016

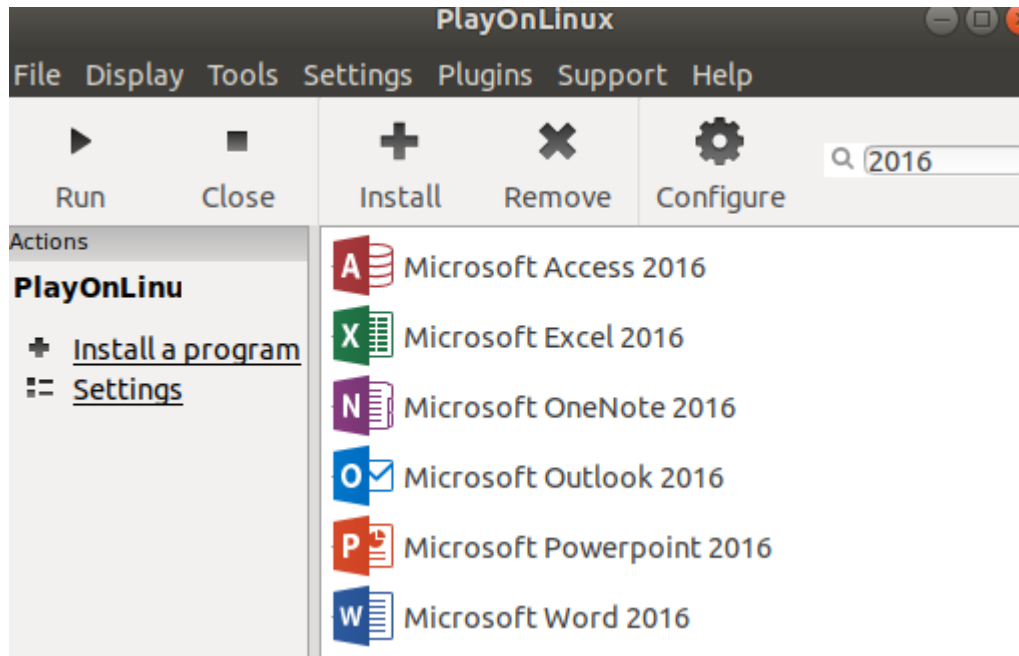

Microsoft Excel 2016

Microsoft Powerpoint 2016

11. Select the **MSACCESS.EXE** and name the link **Microsoft Access 2016**

- Select file `OUTLOOK.EXE` and name the link `Microsoft Outlook 2016`
- Select file `ONENOTE.EXE` and name the link `Microsoft OneNote 2016`
- Select `I don't want to make another shortcut` to exit the wizard.

12. Close the POL configuration screen to exit to the main POL screen. You should now see the apps you now linked to in the main POL screen.

13. Double click on MS Word inside POL to run it and you will be asked to activate Office. When complete, close Word and close POL.

14. You should also find new .desktop files for each of the office apps on your desktop. You can copy or move these files using Nautilus into `~/local/share/applications` if you want them to appear in the Ubuntu dash and 'select application' menus.

Post-Installation

Hi, GlasierXplor here. Just a few notes: after trying to install Office2016 multiple times: winbind needs to be installed in my tests, or else the installer will crash before it starts. I have also tried on wine 4.15 (x86) and it is waaaaaay more stable than in my original answer (3.19). E.g. no more random crashes. – [Timothy Wong](#) Jun 7, 2020 at 16:35

@TimothyWong firstly, thanks for your original instructions. Re:winbind - I already had it installed, so I can't test it. Before which above step does it need to be installed? I will update my answer with a note. – [Jaydin](#) Jun 9, 2020 at 0:16

@TimothyWong Re wine 4.15 - I do get random office crashes with Wine x86 v3.4 - especially from excel. Powerpoint also does not function well. Do you know if it's ok for me to just change the wine version for the office installation from v3.4 to v4.15? Or do I need to reinstall office? – [Jaydin](#) Jun 9, 2020 at 0:19

Re: winbind, as long as it is installed before you start the Setup32.exe. It will crash if not installed, but if you install it after it will still work. Re: wine 4.15, if i recall correctly, I tried that once, but it ended up crashing all applications (it won't even start). A clean install is definitely the way to do this. – [Timothy Wong](#) Jun 9, 2020 at 6:07

- 1 @TimothyWong - I suspect this might be an ongoing discussion as we learn new things and Wine develops. I suggest we move this discussion to chat: chat.stackexchange.com/rooms/115845/... – [Jaydin](#) Nov 4, 2020 at 21:52

Below is the first version of Office 2016 script for PlayOnLinux (based on [Office 2013 one](#)).

5

It uses Wine 3.0, but sometimes it crashes on Office Welcome screen when trying to call `Ex called in 32-bit code`.

One should save it as *pol-mso2016.sh* and then load it into PlayOnLinux by selecting *Tools -> Run a local script* and then follow instructions on the screen.

Doesn't the official Wine PPA support Wine 3.4 on Ubuntu 16.04? If so, you could use that Wine version, and set the script to use the 'System' Wine Version instead of defining a certain version number. Also you might want to make sure PlayOnLinux is the latest version via the PPA, in case it's the version of POL preventing the usage of Wine 3.4 in Ubuntu 16.04. – Dominic Hayes Sep 8, 2018 at 10:17

Could you host it in a gist or somesuch? It's a little hard to copy from the webpage here. – retorquere Sep 10, 2018 at 19:31

installation failed – user47206 Nov 20,

not get it to work. Office 2016 Pro Plus
In Word or Excel it crashes. Message in
code of failed request: 152 (GLX) Minor
t: 242 Current serial number in output
4, the latest 6.17 & 6.18, same error.

neHQ ([here](#)) and [here](#) to use with

onents"

3. Configure wine to use `msxvms` and `mono20` (native, builtin)

4. Copy the AppvlsvSubsystems32.dll and the C2R32.dll from: /Program Files/Common Files/Microsoft Shared/ClickToRun/ to: /Program Files/Microsoft Office/root/Office16/
5. Edit registry by adding a DWORD named HKCU/Software/Wine/Direct2D/max_version_factory, set to zero.

- 1 It didn't work for me in 18.10. Step 4 is to be done after the installation of msoffice I imagine, otherwise that file to be moved is absent. But executing msoffice setup.exe fails. – user47206 Nov 20, 2018 at 11:37

I had to copy the file "AppvlsvStream32.dll" as well in step 4. Also, as pointed out by user47206, running the installer has to be done before step 4. – Mohamed Y. Mar 16, 2020 at 10:48

2

For me the script from above (originally by Quentin Pâris, Eduardo Lucio and N0rbert) worked to install **Office 2016 Pro Plus** under **Ubuntu 18.04**, with the only changes:

- wine version 3.0
- msxml6 in addition to riched20 as overrideDLL

So far Word, Excel, and Powerpoint work, while OneNote and Outlook crashed (don't use them so I didn't even try to fix). Activation worked also, for this open Word -> File -> Account and enter the license key. Here the script, proceed as described above (save as .sh and run under PlayOnLinux -> Tools -> Run local script):

```
#!/bin/bash
```

```
# CHANGELOG
```

```
# Version 0.0.1 by N0rbert - with Wine 3.0 it crashes on Welcome screen when
```

```
idNLSSStringEx called in 32-bit
```

```
script with it on my Ubuntu

1. I have run the script - msoffice installer error "something went wrong"; closing; 2. install msxml6 and riched20 libraries in the newly created office2016 wine3.0 drive (Configure); 3. Configure office2016 drive - configure wine - Libraries - to use the two; 4. re-start the script in POL, selecting overwrite contents; 5. selecting setup.exe (32x), the installer works (clicking the tray icon to see the progress), press Enter at the end; 6. Create shortcut from the drive. -- But none works - "Error in main"

– user47206 Nov 20, 2018 at 13:29

0

Had to use POL wine 3.14 (latest 3.19 or 3.0 /3.4 did not work for me) on Ubuntu 18.04 and steps 1-5 [post Kevin](#) to get MS Office 2016 (Word/Excel/Powerpoint) started. If you download the complete office 2016 IMG file, the installation includes your personal license and is already activated on start.
